

DRIFT PLASTIC

Injection moulding of plastics.

56 Years of Expertise

With over 56 years of experience, Drift Plastic is a leading name in the industry.

This long history is synonymous with expertise, reliability and in-depth knowledge of the market.

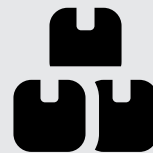

Every customer can count on established know-how and solutions developed through decades of work and innovation.

For this reason, Drift Plastic's experience is a tangible added value and a guarantee of quality.

Skills

Our know-how is our greatest asset, which we make available to all our customers.

Materials

We select the most suitable materials based on the intended use of the item.

Service

From design to delivery: we take care of every last detail to achieve perfection.

Assembling and turn-key service.

About Us

We have been specialists in plastic moulding since 1970.

Founded on a passion for sport and boating, we are now a leading partner for contract manufacturing across a wide range of sectors, from industrial to electrical.

Thanks to our many years of experience, state-of-the-art machinery and complete flexibility, we manage the entire production cycle in-house to ensure bespoke, innovative solutions of the highest technical quality.

OUR MAJOR ADVANTAGE

We do everything in-house

The entire production process is carried out in-house. We have a workshop equipped with advanced technology for mould maintenance.

**Your Partner,
expert and
reliable.**

Out History

From the waters of Lake Como to the peaks of Europe: a story of passion and innovation.

Our adventure began in the 1970s with the moulding of nautical accessories for small boats. Among our first and most distinguished clients was Tullio Abbate, famous for his speed records on Lake Como.

Driven by a love of water sports, we soon expanded our production to embrace the world of windsurfing and began manufacturing multisport helmets.

In the 1980s, riding the wave of this new sport from America, 'Uncle Enrico Caimi' designed an iconic fin made of transparent pink polycarbonate: it was a huge success!

We produced millions of them, a milestone that prompted us to move to larger premises.

In the late 1980s, our keen sense of sporting trends led us to recognise the potential of snowboarding, which was then emerging in Europe.

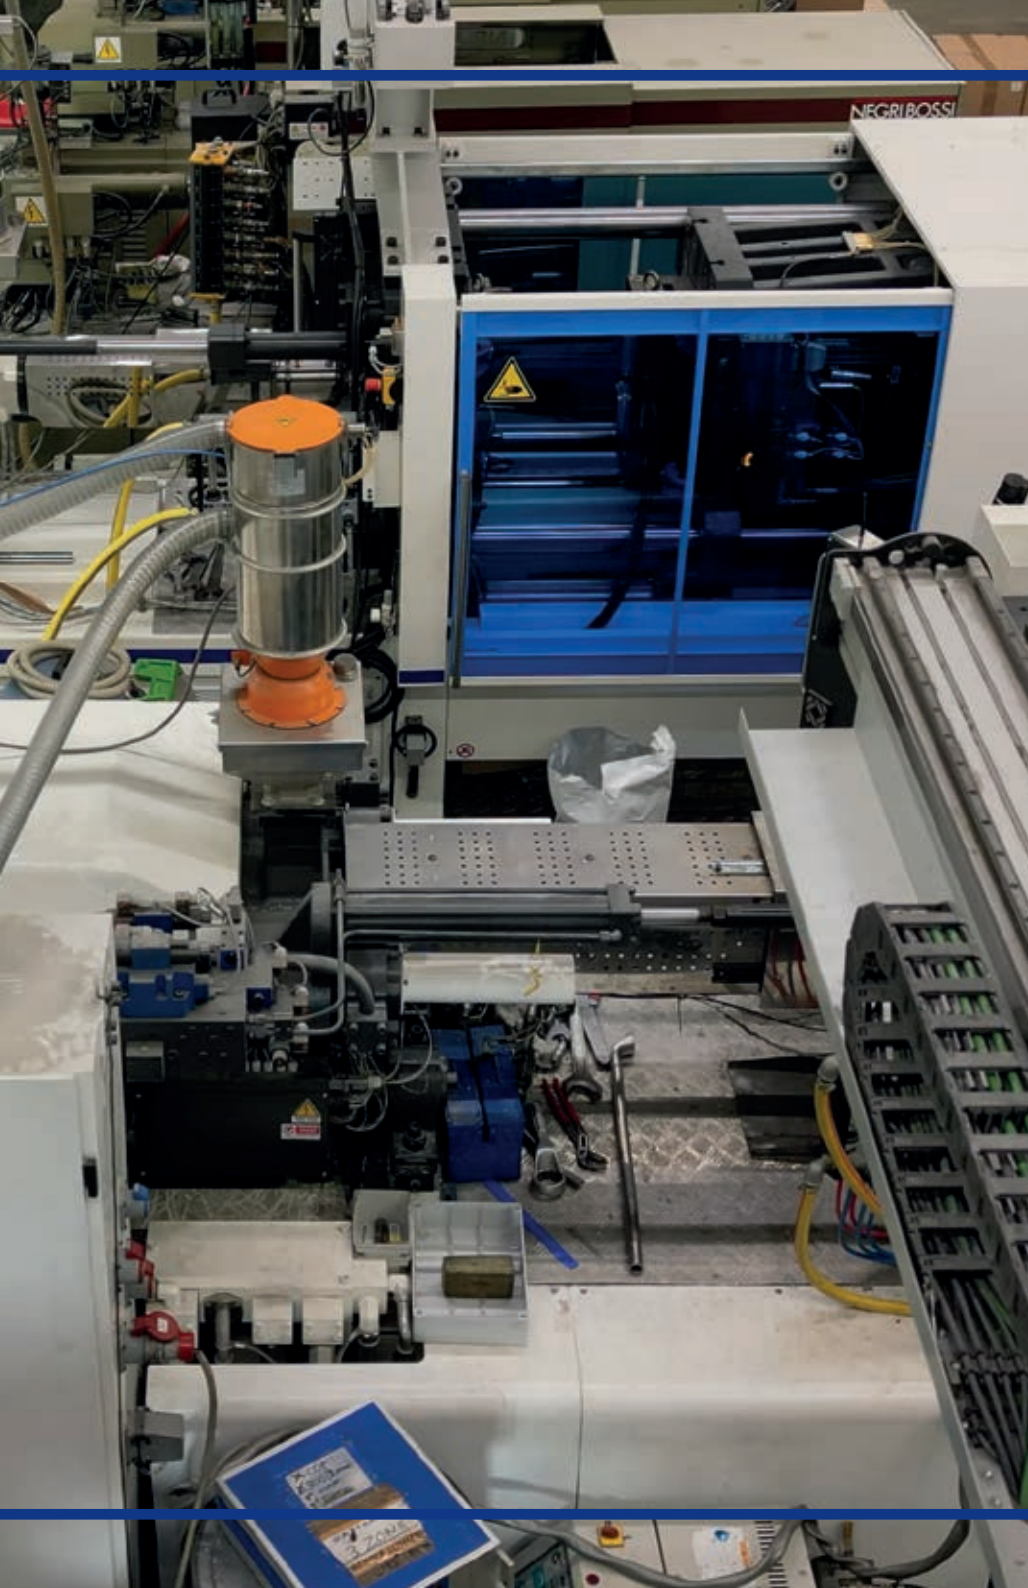

We pioneered the production of soft bindings for the European market and became the first supplier of snowboard bindings to Decathlon, with whom we were already collaborating on windsurfing equipment.

Over time, we have continued to innovate, creating edge-less boards for children and snowshoes inspired by traditional wooden and rope models, designed to ensure maximum strength and durability for the rental sector.

Today, we proudly retain our sporting heritage through the production of helmets, but we have evolved into a versatile company dedicated to contract manufacturing.

We put our heritage at the service of a variety of sectors, manufacturing electrical boxes for indoor and outdoor use, screw-driver handles, diving equipment (boots and fins), components for the construction industry and cases for pressure gauges, tanks for water dispensers and components for air-conditioning systems.

Why Us?

Esperience in injection moulding

For many years, we have been manufacturing high-quality plastic components for a range of industrial sectors, ensuring precision, reliability and consistent

Modern technologies and quality control

We use state-of-the-art machinery and rigorous quality control processes to ensure that our products meet the required standards and deliver consistent results

Tailor-made solutions for every project

We support our clients at every stage, from design to final production, offering bespoke solutions tailored to their specific technical requirements.

Punctuality and ongoing support

We guarantee reliable delivery times and ongoing support to handle every order with professionalism, speed and attention to detail.

Our Production

Advanced technology for a complete production cycle: our key strength lies in our ability to manage the entire production process for every single component in-house.

Our production department comprises:

- **Specialised workshop:** an area equipped with high-tech equipment and machinery, dedicated to the precise and timely maintenance of the moulds used in production.
- **State-of-the-art moulding department:** the beating heart of the company comprises 11 injection moulding machines, with capacities ranging from 62 to 440 tonnes. The specific characteristics of each machine allow us to produce small and medium-sized items of varying weights.
- **Top-quality materials:** we mould using a wide range of polymers, including polyurethane, polycarbonate, ABS, MO-PLLEN, acetal resin and nylon derivatives. Through continuous research and rigorous testing of new plastic products, we remain at the forefront of the industry, selecting the most suitable materials based on the intended use of the item.
